Herding is the practice of caring for roaming groups of livestock over a large area. Herding developed about 10,000 years ago, as prehistoric hunters domesticated wild animals such as sheep and goats. Hunters learned that by controlling animals they once pursued, they could have reliable sources of meat, milk and milk products, and hides for tents and clothing.

Many animals naturally live and travel together in groups called herds. Goats, sheep, and llamas, for instance, live in herds as a form of protection. They move from one fertile grassland to another without an organized direction.

Predators such as lions, wolves, and coyotes pose major risks to domestic herds. Herders have traditionally provided protection for the animals. Herders also keep the herd together and guide it toward the most fertile grassland.

Herders often specialize in a particular type of livestock. Shepherds, for instance, herd and tend to flocks of sheep. Goatherds tend to goats, and swineherds to pigs and hogs.

Herders who tend to <u>cattle</u> were once called cowherds. Most cowherds are now known as <u>cowboys</u>. In Australia and New Zealand, cowboys are called jackaroos and jillaroos. In Latin America, they are known as *vaqueros*.

Herders often use herding dogs to help them tend their herd. Herding dogs have been bred to respond to the whistle or other commands of the herder. They keep a herd of sheep, goats, or cattle together. Herding dogs, such as kelpies and koolies, can also guide herds through dangerous terrain. Herding dogs are so skilled and efficient that they often participate in competitions. At these competitions, called trials, herding dogs move animals around an enclosure, through a series of fences and gates.

Larger dogs are often used by herders as <u>livestock guardian dogs</u>. These dogs, such as Great Pyrenees, have been bred to protect herds, usually sheep and goats, from predators such as wolves and coyotes. In Africa, livestock guardian dogs such as Anatolians protect domestic herds from lions and cheetahs.

Herding often takes place in transition zones, where land is not fertile enough for intensive farming. Animals can live on the forage of these grasslands, while people cannot.

#### **Nomadic Herding**

There are several different types of herding. One of the most ancient forms of herding is <u>nomadic</u> herding. Nomadic herders roam in small tribal or extended family groups and have no home base. Nomads live in <u>arid</u> and semiarid parts of Africa, Asia, and Europe, and in the <u>tundra</u> regions of Asia and Europe.

1 of 8

In Africa, nomads herd cattle, goats, sheep, and camels. In the tundra, they usually herd domesticated reindeer. Other animals managed by nomadic herders include horses, musk-oxen, and yaks. For many nomads, their herds provide meat, milk, and hides for their own use, as well as for trade.

Nomadic herding is sometimes considered a form of subsistence agriculture. It actually is not. Subsistence farmers grow and harvest crops mostly for their immediate family and community. Unlike subsistence farmers, herders are traditionally wage-earners: They sell their herds' materials for goods and services, or herd other people's animals for a fee. Often, this trade is part of the informal economy—not accounted for by the government of a region. In Africa, the United Nations estimates that herders are responsible for more than \$100 million in economic activity every year.

The Fulani people of Nigeria have long been nomadic herders. They move with their cattle from one grazing area to another. The cattle feed on scrub and grasses in land unsuitable for farming. The Fulani rely on cattle for milk, but rarely slaughter the animals for meat.

Nomadic herding as a way of life is declining because of natural disasters such as droughts, loss of land area due to development and degradation, and pressure from governments to lead a settled existence.

#### Semi-Nomadic Herding

Semi-nomadic herders live a more settled life than nomads, but still follow their herds for long periods of time. Millions of Mongolians, for example, have been semi-nomadic herders for thousands of years. They traditionally herd sheep, goats, horses, and Bactrian camels. Today, about a quarter of Mongolia's population continues to live a semi-nomadic herding lifestyle.

Semi-nomadic herders can be associated with invasions. The Mongol leader Genghis Khan conquered almost all of Asia by uniting various nomadic and semi-nomadic tribes in the 1200s. Their familiarity with vast tracks of land, and living in sparse conditions for long periods of time, made these herders ideally suited to moving across varied terrain.

The Sami are semi-nomadic herders indigenous to the Arctic. They live throughout northern Norway, Sweden, Finland, and on the Kola Peninsula of Russia. For centuries, the Sami have herded reindeer as a principal means of livelihood, supplemented by fishing and trapping.

Development has made it difficult for semi-nomadic herders to sustain their traditional way of life. State and national borders, for example, have divided traditional Sami land. Industries like timber and mining have reduced grazing land. Today, some laws exist to protect the Sami and their rights to use the land, but conflicts still exist.

#### Transhumance

Another type of herding is called transhumance. Transhumance herders follow a seasonal migration pattern, usually moving to cool highlands in the summer and warmer lowlands in the winter. Unlike nomads, these herders move between the same two locations, where they have permanent settlements.

Transhumance has had an <u>enormous</u> impact on the <u>landscape</u>. In the European Alps, for instance, thousands of years of transhumance have transformed <u>foothill</u> forests into <u>alpine pastures</u>. Swiss and German herders traditionally led sheep, cattle, and pigs to pastures at elevations above 2,000 meters (6,562 feet).

Transhumance in the Alps actually involved three herding grounds. The village floor, at the lowest elevation, was where livestock were kept sheltered during the cold and snowy winter months. Shepherds led herds to the middle pastures during the spring. During the summer and fall, shepherds led sheep and cattle to the high alpine

pastures, while pigs stayed in the middle area.

Transhumance is still widely practiced throughout agricultural communities in Switzerland, Germany, Austria, Italy, and Slovenia.

The Kirghiz horsemen of Central Asia used to migrate between regions of eastern Afghanistan, western China, and southern Tajikistan with their herds of goats, yaks, and camels. They would spend their winters in the lower valleys of China or Tajikistan, moving to high mountain grasslands in the summer.

When China restricted its borders to travelers, the Kirghiz transhumance herders lost the ability to summer in Chinese mountain valleys. While some Kirghiz have settled into sedentary lives in other regions, a small group still upholds their traditional lifestyle in the remote, austere Wakhan Corridor of Afghanistan.

#### Ranches

Most large-scale livestock herds today live on ranches. Ranching involves raising livestock on a single, large tract of land. Ranches are common in Australia and New Zealand, the western United States, Argentina, and Brazil. Ranchers don't migrate the way nomadic or transhumance herders do.

However, throughout most of the 1800s, ranchers in the United States set their cattle and sheep loose to roam the prairie as herds. Most of the grazing land was owned by the government, not individual ranchers. This was the so-called "open range." Twice a year, cowboys would round up cattle for branding (in spring) and for gathering for sale (in autumn). Round-ups are still a part of ranching culture, but livestock now roam on private land.

#### Herding and Land Use

Herders maintain complex maps of the area where their herds graze. These maps include seasonal weather patterns; partnerships or conflicts with other herders, ranchers, or landowners; and soil quality. Herders can be excellent resources for data about the agricultural fertility of an area.

A herder's vast knowledge is threatened by the pressure to conform to modern society. Permanent residence allows members of a community to have access to education and health care facilities. It also affords members a greater choice in their professional and personal lives.

However, the complex social structure of herding communities is lost as they are absorbed into mainstream culture. Unique language and customs become outdated and not useful in settled urban or suburban life.

The Bedouin people of the Arabian Peninsula and the Middle East, for example, are almost entirely semi-nomadic and settled. Prior to the 20th century, Bedouins were mostly nomads, herding sheep and goats. A series of droughts in the 1960s throughout Western Asia limited fertile areas. Oil production in Egypt and Saudi Arabia further limited land available for grazing.

More importantly, however, Bedouins sought a better standard of living. Schools, health-care facilities, law enforcement, and social opportunities are usually greater in settled areas than through herding lifestyles.

#### VOCABULARY

Term	Part of Speech	Definition
absorb	verb	to soak up.

alpine	adjective	having to do with mountains.
Arctic	noun	region at Earth's extreme north, encompassed by the Arctic Circle.
arid	adjective	dry.
austere	adjective	severe, simple, or lacking in luxury.
barbed wire	noun	twisted metal with sharpened points, often used for fences.
Bedouin	noun, adjective	people and culture native to the Arabian Peninsula, Middle East, and North Africa.
border	noun	natural or artificial line separating two pieces of land.
branding	noun	marketing or sales process that creates a unique reputation for a product.
breed	verb	to produce offspring.
cattle	noun	cows and oxen.
complex	adjective	complicated.
conform	verb	to comply or act according to the accepted standard.
conquer	verb	to overcome an enemy or obstacle.
cowboy	noun	person who herds cattle on a ranch, usually on a horse.
crop	noun	agricultural produce.
custom	noun	a way of doing things that has been handed down from one generation to the next.
data	plural noun	(singular: datum) information collected during a scientific study.
degradation	noun	breaking down.
development	noun	construction or preparation of land for housing, industry, or agriculture.
domesticate	verb	to tame or adapt for human use.
drought	noun	period of greatly reduced precipitation.
economic	adjective	having to do with money.
education	noun	process of acquiring knowledge and critical-thinking skills.
efficient	adjective	performing a task with skill and minimal waste.
elevation	noun	height above or below sea level.
enclosure	noun	area surrounded by a wall, fence, or other physical boundary.
enormous	adjective	very large.
familiar	adjective	well-known.
farming	noun	the art, science, and business of cultivating the land for growing crops.
fee	noun	price or cost.
fertile	adjective	able to produce crops or sustain agriculture.
foothill	noun	hill at the base of a mountain.
forage	noun	fodder, or food for horses or cattle.

forest	noun	ecosystem filled with trees and underbrush.
Fulani	noun, adjective	nomadic herders of northern Nigeria. Also known as the Fula.
Genghis Khan	noun	(1162-1227) founder of the Mongol empire.
goatherd	noun	herder who tends to goats.
government	noun	system or order of a nation, state, or other political unit.
grass	noun	type of plant with narrow leaves.
grassland	noun	ecosystem with large, flat areas of grasses.
harvest	noun	the gathering and collection of crops, including both plants and animals.
health care	noun	system for addressing the physical health of a population.
herd	noun	group of animals.
herder	noun	person who controls and takes responsibility for a group of animals such as sheep, cattle, or horses.
herding	noun	practice of caring for roaming groups of livestock over a large area.
herding dog	noun	dog bred to keep a herd of livestock safe and together.
hide	noun	leather skin of an animal.
highlands	plural noun	plateau or elevated region of land.
homestead	noun	area of land including a dwelling and any outbuildings, such as barns.
indigenous	adjective	native to or characteristic of a specific place.
informal economy	noun	exchange of goods and services where taxes are not paid to the government, or services are illegal, such as drugs. Also called the black market.
jackaroo	noun	Australian cowboy.
jillaroo	noun	Australian cowgirl.
landscape	noun	the geographic features of a region.
language	noun	set of sounds, gestures, or symbols that allows people to communicate.
Latin America	noun	South America, Central America, the Caribbean, and Mexico.
Levant	noun	area bordering the eastern Mediterranean Sea, including the nations of Syria, Lebanon, Jordan, and Israel.
livelihood	noun	ability to economically support oneself.
livestock	noun, plural noun	animals raised for sale and profit.
livestock guardian dog	noun	dog bred to protect livestock herds from predators.
lowland	noun	slow-flowing river ecosystem usually found in lower altitudes.
map	noun	symbolic representation of selected characteristics of a place, usually drawn on a flat surface.
meat	noun	animal flesh eaten as food.
migrate	verb	to move from one place or activity to another.

migration pattern	noun	predictable movements, in time and space, of a group of animals or people.
milk	noun	white liquid produced by female mammals to feed their young.
mining	noun	process of extracting ore from the Earth.
natural disaster	noun	an event occurring naturally that has large-scale effects on the environment and people, such as a volcano, earthquake, or hurricane.
nomadic	adjective	having to do with a way of life lacking permanent settlement.
oil	noun	fossil fuel formed from the remains of marine plants and animals. Also known as petroleum or crude oil.
open range	noun	large area owned by the government where many owners' livestock may graze, usually referring to the situation in the late 1800s in the western United States.
outdated	adjective	no longer useful.
overgrazing	noun	process of too many animals feeding on one area of pasture or grassland.
pasture	noun	type of agricultural land used for grazing livestock.
prairie	noun	large grassland; usually associated with the Mississippi River Valley in the United States.
predator	noun	animal that hunts other animals for food.
prehistoric	adjective	period of time that occurred before the invention of written records.
principal	adjective	leading or dominant.
ranch	noun	large farm on which livestock are raised.
ranching	noun	practice of raising livestock for human use, such as food or clothing.
region	noun	any area on the Earth with one or more common characteristics. Regions are the basic units of geography.
reliable	adjective	dependable or consistent.
roam	verb	to wander or travel over a wide area without a specific destination.
round-up	noun	gathering of all the livestock on a ranch. Also called a muster.
Sami	noun	people and culture native to northern Scandinavia.
savanna	noun	type of tropical grassland with scattered trees.
scrub	noun	area of arid grassland covered with low-lying trees and bushes.
seasonal	adjective	likely to change with the seasons.
sedentary	adjective	staying in one place.
semiarid climate	noun	(dry climate) region that receives between 25 and 50 centimeters (10-20 inches) of rainfall every year.
semi-nomadic	adjective	people or communities who follow their food source for long periods of time, but can also live settled lives.
settlement	noun	community or village.
shepherd	noun	herder who tends to sheep.

slaughter	verb	to kill and butcher an animal for food.
soil	noun	top layer of the Earth's surface where plants can grow.
sparse	adjective	scattered and few in number.
stalk	verb	to pursue or approach prey or an enemy.
subsistence agriculture	noun	type of agriculture in which farmers grow crops or raise livestock for personal consumption, not sale.
suburb	noun	geographic area, mostly residential, just outside the borders of an urban area.
supplement	verb	to increase or add to.
swineherd	noun	hearder who tends to pigs and hogs.
terrain	noun	topographic features of an area.
timber	noun	wood in an unfinished form, either trees or logs.
trade	noun	buying, selling, or exchanging of goods and services.
transhumance	noun	seasonal migration of livestock and herders between warm valleys and cool foothills.
transition zone	noun	area between two natural or artificial regions.
tribe	noun	community made of one or several family groups sharing a common culture.
tundra	noun	cold, treeless region in Arctic and Antarctic climates.
unique	adjective	one of a kind.
United Nations	noun	international organization that works for peace, security and cooperation.
urban	adjective	having to do with city life.
valley	noun	depression in the Earth between hills.
vaquero	noun	Latin American cowboy.
vast	adjective	huge and spread out.
wage	noun	money or goods traded for work or service performed.
Wakhan Corridor	noun	area of northeastern Afghanistan that borders China.
water rights	plural noun	right of a consumer (person, business, or government) to use water from a specific source. Sometimes, water rights include the amount of water a consumer is allowed to use.
weather pattern	noun	repeating or predictable changes in the Earth's atmosphere, such as winds, precipitation, and temperatures.
