Captive Breeding Case Studies

Students complete a case study for one species in a captive-breeding program and evaluate the effectiveness of the program.

GRADES
9 - 12+

SUBJECTS
Biology, Geography, Human Geography, Physical Geography

OVERVIEW

Students complete a case study for one species in a captive-breeding program and evaluate the effectiveness of the program.

For the complete activity with media resources, visit:
http://www.nationalgeographic.org/activity/captive-breeding-case-studies/

DIRECTIONS

1. Introduce the activity.
Tell students they will complete a detailed case study for one species in a captive-breeding program and evaluate the effectiveness of the program. Have students go to the Smithsonian National Zoological Park’s Captive Breeding page to choose and research a species.

2. Have students complete their case studies.
Students’ case studies should include the following information:
• species name, natural range, and habitat
• a simple world map showing the species’ historic and current ranges and/or historic and current population statistics
• reason the species is threatened or endangered
• when the captive breeding program began
• difficulties with maintaining the species’ population in the wild
• difficulties with breeding the species in captivity
• assessment of whether or not the captive-breeding program has been successful and why
• explanation of how the program might help the overall biodiversity of the regions where the species naturally lives

3. Have students present their findings to the class.
Have each student present their findings to the class. Encourage students in the audience to ask questions.

OBJECTIVES

Subjects & Disciplines

Biology
Geography
• Human Geography
• Physical Geography

Learning Objectives

Students will:

• complete a case study for one species in a captive-breeding program
• present their findings

Teaching Approach

• Learning-for-use
Teaching Methods

- Discussions
- Research

Skills Summary

This activity targets the following skills:

- Critical Thinking Skills
  - Applying
  - Evaluating
  - Remembering
  - Understanding
- Geographic Skills
  - Answering Geographic Questions

National Standards, Principles, and Practices

**NATIONAL GEOGRAPHY STANDARDS**

- **Standard 14:**
  How human actions modify the physical environment

**NATIONAL SCIENCE EDUCATION STANDARDS**

- **(9-12) Standard C-4:**
  Interdependence of organisms

Preparation

**What You’ll Need**

**MATERIALS YOU PROVIDE**

- Paper
REQUIRED TECHNOLOGY

- Internet Access: Required
- Tech Setup: 1 computer per learner

PHYSICAL SPACE

- Computer lab

GROUPING

- Large-group instruction

BACKGROUND & VOCABULARY

Background Information

Captive-breeding programs breed endangered species in zoos and other facilities to build a healthy population of the animals. By becoming familiar with the issues surrounding these programs, you can make judgments about whether or not they save species from extinction.

Prior Knowledge

Recommended Prior Activities

- Captive Breeding and Species Survival
- Introduction to Captive Breeding
