

Research Notes

Engineers do research before they can solve problems. Today, you will also do research. You will research solutions to stop the spread of germs. This will help you to design something to help people use this solution.

Choose which solution you want to research by circling it:

1. Handwashing
2. Staying home if you are sick
3. Keeping your hands from touching your face
4. Covering coughs and sneezes

Research the solution you chose using the *Getting Rid of Gross Germs Resources* handout.

How will the solution you researched stop the spread of germs? _____

What NEW information did you learn? _____

Limits: What is keeping EVERYONE from using this solution ALL OF THE TIME? Circle all that apply. Add your own reason(s) to the lines below, if you want.

- Time to do it

- They don't know about it or how to do it right

- The materials for it are not available everywhere

Other reasons:
